

## Contributions from the Physical Laboratory of the University of Michigan Volume 5

Filesize: 2.64 MB

### ***Reviews***

*The ebook is straightforward in read better to fully grasp. I could possibly comprehended every little thing out of this composed e pdf. I found out this ebook from my dad and i suggested this pdf to find out.*

*(Prof. Lorine Grimes)*

## CONTRIBUTIONS FROM THE PHYSICAL LABORATORY OF THE UNIVERSITY OF MICHIGAN VOLUME 5

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 248 pages. Dimensions: 9.7in. x 7.4in. x 0.5in. This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1913 edition. Excerpt: . . . information as to this possible variation of resistivity, and as to the identity of the electrical and optical parameters given in the elementary equations. On this account I have calculated the resistivities of the pure molten metals from the optical data I have obtained. These and various electron parameters are given in the following table. Only the optical results for yellow and green light were used, those for violet light having altogether too large experimental errors. Meiers results were used for mercury. The resistivities so obtained, are compared with those found by Northrup and Suydam for bismuth, lead, cadmium and tin at 400. While no particular effort was made to keep the temperature of the liquid metals constant during the optical investigation, it was never very far from this value. The resistivity of mercury at ordinary temperatures was used. 1 G. H. Livens. *Phil. Mag.* , 30, 112, 1915. 3 W. Nleier, loc. cit. E. F. Northrup and V. A. Suydam, *Journ. Franklin Inst.* , 175, 153, 1913. An auxiliary figure (Fig. 13) is also given which compares the resistivities of tin-lead and tin-bismuth alloys, electrically and optically determined. The electrical data for the two series of alloys are taken from papers by P. Muller, and by E. F. Northrup and R. G. Sherwood respectively. The optical resistances of the tin-lead alloys were taken directly from the optical results of this series. As the optical characteristics of tin-bismuth alloys were not investigated, the optical...
